Full-Stack Product Engineer

Full-stack product engineer with 9 years in software and nearly 3 years shipping production web apps across frontend, backend workflows, CMS, data modeling, and deployment, including property management software for the Australian market. Strong in React, Next.js, TypeScript, Supabase, AWS, and DatoCMS.

WORK EXPERIENCE

Mashup Garage01/2024 - PresentPhilippines

- Owned end-to-end implementation of a property management platform for Australian self-managing landlords, covering frontend, backend workflows, database modeling, and deployment; reduced client operating cost by 62.5%.
- Built full-stack features across public websites, dashboards, CMS-driven pages, and internal product workflows using React, Next.js, TypeScript, Supabase, DatoCMS, AWS, Tailwind CSS, and shadcn/ui.
- Developed the public-facing frontend for an agency discovery marketplace and integrated DatoCMS-powered editorial content into the discovery experience.
- Delivered agency discovery, review submission, and dashboard workflows for a recruitment platform, including UI implementation and portions of the Supabase data model.
- Implemented Supabase queries, authentication flows, and API integrations.

Career Transition03/2023 - 01/2024Philippines

- Transitioned from native Android to web engineering; built projects in JavaScript, TypeScript, and React before joining Mashup Garage.

Mad Underground01/2020 - 03/2023Philippines

- Built and released production Android applications in Java via Google Play Console.
- Implemented UI screens and developer-facing tools in collaboration with designers.

Anino Inc.04/2018 - 01/2020Philippines

- Implemented Unity and C# UI features from designer mockups, improving design-to-build consistency.
- Collaborated with engineers, designers, artists, and producers in Agile workflows.
